# 1939 Book of FLOWERING BULBS

## *The New Parrot Tulip* **OPAL QUEEN**

A variety that defies description. Let us state briefly that it is **all** the name stands for. The opalescent coloring is fascinating and its queenly stature, because of a long stem, beyond compare. These qualities make it a desirable exhibition variety for the garden and flower show. Height 24 inches.

Price: 85c per bulb; \$8.50 per doz.; \$65.00 per 100.

## **THERESE**

*A Sensation among new  
Parrot Tulips*

A sport of Darwin Tulip Farncombe Sanders, it has retained the many good qualities of this so popular variety. The very large flower is of subdued scarlet color with the inside of the petals a lighter but brilliant rosy red. This effect is heightened by a white center, bordered blue. The strong, tall stem carries its flower gracefully to an average height of 26 inches.

Price: 70c per bulb; \$7.00 per doz.; \$55.00 per 100.

# Dutch Bulbs at Their Best

For many decades the Van Bourgondien family has been established in the Holland Bulb Growing Center and several generations devoted their lives to the perfection of bulb growing. The history of the gradual improvement in cultivation and soil requires too much space to include in this brief introduction. However, one can readily understand the hardships and disappointments our forefathers had to overcome in order that we, their sons, might be endowed with the knowledge necessary to produce the high grade bulbs we now offer our clientele.

The large families so prevalent in Holland served a twofold purpose. They not only created a real home, making the necessity for outside diversion superfluous, but also enabled them to fill the key positions in their own business with responsible men, who forever were endeavoring to improve their product and service.

So, today our entire Holland nursery is supervised by members of the Van Bourgondien family. Every step in the preparation of soil, the planting, growing, harvesting, storage and export of bulbs is given careful attention. Combining all these efforts, we produce bulbs that eventually will give most satisfactory blooms in your garden.

However, one of the very important stages in the life of a flower bulb is often neglected. By that we mean the storage conditions to which they

are subjected from the time of their arrival in America, until they are packed for shipment to the customer. Our American warehouses are located on the south shore of Long Island, where a cool sea breeze helps to maintain a moderate temperature during the months of September and October, and thus prevents evaporation of the life-giving sap present in every bulb. After cold weather sets in, our warehouses are heated sufficiently to keep a temperature of between 45 and 50 degrees, much to the inconvenience of those whose duties consist of the counting, packing and shipping of orders. Such precautions, however, help to maintain the high quality of our bulbs which is reflected in the excellence of their blooms at flowering time in your garden.

When purchasing bulbs, one should also consider their size. Of course, some varieties naturally grow a small bulb and others a large one. The bulbs we offer in this catalog are Top-Size in every respect. They represent the "cream of the crop," yet our prices are no higher than you would pay elsewhere for bulbs of uncertain origin and inferior quality.

We will continue to direct our efforts toward better service for the American gardeners and supply them with bulbs and plants of high quality at low cost.

*"When quality is passed up for a low price, you are simply mortgaging the results which you expect in service and thereby assume the risk of losing far more in the end than you thought you were gaining in the beginning."*

LOUIS A. HERBERT

# The Majestic BREEDER TULIPS

NEXT to the Darwins, the most popular class of Tulips. Often they excel the Darwins in size of flower, length and strength of stem, and general beauty. Breeders are noted for their soft pastel shades, exquisitely artistic, also for their lasting qualities. They are magnificent in the garden and for cut flowers where imposing formal effects are desired.

Excellent for slow forcing. Give the Breeders a prominent place in your planting program.

## Daffodils for Naturalizing

Hundreds of thousands of Daffodils are used yearly for this purpose, because when once planted they continue without any care to give you immeasurable joy year after year.

Numerous varieties have proved very successful for this purpose and we will use no others. Practically all types of Daffodils contain some varieties suitable for this purpose, thereby increasing the number of varieties and adding greatly to the desire of naturalizing Daffodils.

Only sizes which are most desirable for naturalizing without continuous care are selected for your favorite garden spot, "the natural garden." Only varieties having proved to be hardy are selected for this purpose.

Practically any soil has been found suitable, but when planted under and among trees and in woodlands, the leaves of the trees should not be removed, as taking away this natural food will not only injure your trees but also will prevent the Daffodils from producing as they should.

Plant at least 8 inches deep but avoid places where water may collect at any time as they like drainage.

Try to plant them before October 15th or shortly thereafter. Place your order early as the demand is increasing for these bulbs at the special low prices we have adopted. We cannot take orders for less than 50 bulbs.

**Per 50, \$2.25; per 100, \$4.25; per 1000, \$40.00.**

## Hyacinth Bulbs Grown in

After harvesting our bulbs, they are carefully graded. TOP SIZE or EXHIBITION size represents the largest bulbs grown. They serve many purposes, such as displays at flower shows, formal plantings in gardens where flowers of great size and uniformity are desired, and for indoor culture, individually in a 4-inch pot or collectively in large bulb pans.

Our SPECIAL BEDDING Hyacinths comprise an intermediary size, almost exclusively used for outdoor planting in beds or clumps. They are as vigorous and full of vitality as Top Size bulbs, and have invariably given highly satisfactory results.

## SPECIAL BEDDING HYACINTHS

Do not mistake this special size with the so-called unnamed Bedding Hyacinths. Our bulbs are especially selected and measure from  $6\frac{1}{4}$  to 7 inches in circumference. They produce large trusses on sturdy stems and may be planted from 6 to 8 inches apart with at least 5 inches of soil on top of bulb.

## Our Own Holland Nurseries

Painstakingly we prepare the soil in our fields, often spading it by hand to a depth of 30 inches. During the entire growing period, our men constantly go from bed to bed and from field to field, watching for the first sign of disease which may develop and nip it in the bud, thus preventing its spreading beyond control and doing untold damage. When a diseased bulb is found, it is immediately removed together with the bulbs growing within a radius of 1 foot. The soil is also carefully taken away.

Culture of Hyacinth bulbs is expensive and propagation slow. It is only through constant watchfulness and attention that high quality bulbs can be produced.

While we have not increased the price over that formerly asked for the older strains, we can truthfully say that our customers now receive double value. Plant them this year, you will marvel at the flowers early next spring. These new Crocus are so far superior in size and beauty we feel sure that the older strains will disappear from the market as soon as the Ideal Crocus can be produced in sufficient quantities. The bulbs offered here are Top Size, grown in our own Holland Nurseries. Even the Mixed Collections are made up of the named varieties.

(Crown Imperial)

This unique and most attractive flower derives most of its name from the crown-shaped flower, as shown in the illustration. The original species grew wild in English meadows, and the present form is excellent for naturalizing as well as for the garden or border. It blooms in May and June. Children admire the pearly drops of nectar found in the chalice.

IRIS RETICULATA

### Iris Reticulata

This lovely species is one of the treasures of the garden or rock garden. It can be described as a small form of the Spanish or Dutch Iris. Its main value lies in the fact that it may be forced into bloom in the house with the greatest ease. Six bulbs put into a 4-inch pot when received will bloom Christmas time. The fragrant blossoms remind one of a bunch of fresh violets. Hardy with reasonable protection. It is one of the loveliest early flowering bulbs for the rock garden. \$1.60 per doz.; \$12.00 per 100.

### Leucojum Vernum (Spring Snowflake)

This pretty bulbous plant is similar to the Snowdrop but of larger, stronger and more attractive habit. In rich soil it grows to a height of 8 inches and produces, in late April, beautiful large white flowers, tipped with green, that are excellent for cutting. 70c per doz.; \$5.00 per 100; \$45.00 per 1000.

DUTCH IRIS

ENGLISH IRIS

## ENGLISH IRIS

(Bulbous)

Mixed Colors

For Outdoor Planting Only

Although called English Iris, this lovely bulbous Iris originally came from the alpine meadows of the Pyrenees. In the sixteenth century, it made itself at home in England, hence, its name. It is extremely hardy and loves a cool, moist soil.

The English Iris have been almost non-existent in the United States, and could not be imported. Fortunately, we located a farm in Michigan where these Iris can be grown to perfection.

Grown from seed, we can supply only mixed colors which vary from light blue to deep purple and include pure white as well as beautifully feathered types.

Price: 75c per doz.; \$5.00 per 100; \$45.00 per 1000.

# Japanese Iris

## GARDEN ORCHIDS

### Field-grown clumps cultivated in the soil of Long Island

The increased demand for our Japanese Iris in recent years, proves beyond a doubt their excellent quality and adaptability to general garden use. Once established, they will flower profusely year after year. The immense flowers, often the size of a dinner plate, display their glory immediately after the German Iris has finished blooming. Use them as a background in the perennial border, or, better still, around your lily pool. Don't let them starve to death; an application of manure worked into the soil in early spring will repay you tenfold.

It takes about two years for Japanese Iris to become firmly established and if they fail to flower the first season after transplanting, there's no cause for alarm. They may be successfully transplanted in early spring as well as in the fall.
